

Mendoza, 20 de May, 2021.

Editor in Chief:

In response to the invitation to publish my work in the next issue of the Journal of Construction Research, I have the pleasure of sending you the manuscript " EARTHEN ARCHITECTURE IN SEISMIC ZONES: LATIN AMERICA AND THE PACIFIC FIRE BELT" to consider its publication as an original article in Journal of Construction Research

This paper shows the importance of building with earth and how there are antecedents that earth construction is a technique widely used for the construction of dwellings in seismic zones, as is the case of Latin American countries located in the Pacific Ring of Fire. From this statistical data analysis, it is possible to appreciate the importance of having regulations and trained professionals to be able to intervene from the beginning of the earth construction works until the end of its useful life.

All the authors involved in this work have been researching this subject for several years in the hope of being able to help achieve a more equitable society by contributing to a better quality of life in many sectors of the world.

All authors declare that the work is original and has not been previously published or is in the process of being reviewed by any other journal.

Grateful for the invitation to participate in such a prestigious journal, I await confirmation of receipt and acceptance of the work.

Best regards.
